What is Storm Water?

Storm water drainage lines are located throughout the entire city.

Rainwater flows off urban streets, parking lots, construction sites, and neighborhoods, where it is then channeled into the city's storm water drainage system of pipes and ditches.

Its final destination is our creeks, bays, lakes, and oceans. Often times, trash, grass clippings, hazardous waste, and oil are carelessly dumped into storm water drainage inlets and ditches.

Since storm water is untreated, this causes not only pollution to our coastal waters, but results in clogging of the drainage system, which could lead to street flooding.

You can help prevent storm water pollution by exercising some of the following recommendations:

Ways to Prevent Storm Water Pollution

- ☛ Take hazardous waste products, such as batteries, tires, oil, grease and like items to the City of Corpus Christi Household Hazardous Waste Facility. For more information call 826-1631.
- ☛ Recycle products whenever possible.
- ☛ Place excess grass clippings in flowerbeds or compost areas.
- ☛ Dispose of litter and trash properly to prevent it from floating into storm water drainage inlets.
- ☛ Coordinate brush trimming & yard work with the city's scheduled brush pick-up.
- ☛ Report illegal dumping immediately by calling the Storm Water Hotline.
